

Place Value: Medium Practice Paper 2 Answers

Q#	Answer	Explanation
1	D	The digit 6 is in the thousands place, so its value is 6,000.
2	B	Compare tenths first. Numbers with 5 tenths are larger, and 0.520 has the greatest hundredths afterwards.
3	A	Look at the hundreds digit (4). Since it is less than 5, round down to 7,000.
4	A	Dividing by 100 moves digits two places to the right. 5,600 becomes 56.
5	8,000 + 300 + 5	8,305 has 8 thousands, 3 hundreds, 0 tens and 5 ones.
6	A	Multiplying by 10 moves the decimal one place to the right: 0.375 becomes 3.75.
7	A	4.58 is greater than 4.56 but less than 4.6.
8	A	0.408 has 4 tenths, 0 hundredths and 8 thousandths.
9	C	Compare tenths then hundredths. 0.406 has the smallest value.
10	A	3 thousands = 3,000; 5 tens = 50; 2 ones = 2. Total = 3,052.
11	A	Dividing by 10 moves the decimal one place to the left.
12	A	8,321 rounds down to 8,300 because the tens digit is less than 5.
13	A	0.92 is largest because it has 9 tenths. Between the others, 0.29 is greater than 0.209.
14	A	6 tenths is 0.6 and 4 hundredths is 0.04. Adding gives 0.64.
15	A	Subtracting 1,000 reduces the thousands digit by one.
