

Place Value: Medium Practice Paper 3 Answers

Q#	Answer	Explanation
1	D	The digit 8 is in the thousands place in 48,261, so its value is 8,000.
2	B	Compare tenths first. All numbers start with 0.5 except 0.590 which has 9 hundredths making it the largest.
3	B	The tens digit is 8 which is 5 or more, so we round the hundreds up to 7,500.
4	A	Dividing by 100 moves digits two places to the right of the decimal. 4,300 becomes 43.
5	A	6,304 has 6 thousands, 3 hundreds, 0 tens and 4 ones.
6	A	Multiplying by 10 moves the decimal point one place to the right.
7	A	5.29 is greater than 5.28 but less than 5.3.
8	C	Compare tenths first, then hundredths. 0.406 has the smallest value.
9	A	4 thousands = 4,000; 7 tens = 70; 5 ones = 5. Total = 4,075.
10	A	Dividing by 10 moves the decimal point one place to the left.
11	A	9,356 rounds to 9,400 because the tens digit is less than 5.
12	A	0.92 is the largest. Between 0.29 and 0.209, 0.29 is greater.
13	A	7 tenths = 0.7 and 5 hundredths = 0.05. Together they make 0.75.
14	A	Subtracting 1,000 reduces the thousands digit by one.
15	C	In 3.487, the tenths digit is 4, the hundredths digit is 8, and the thousandths digit is 7.
